

Supply Chain Network Optimization

Presenter: Cuong V. Lam, Supply Chain Specialist – Tessengerlo Kerley Inc.

For over 100 years Tessengerlo Group, a 1.6B € diversified industrial organization has been delivering world class products and solutions around agriculture and bio residuals. Presently the organization operates at more than 100 locations across the globe, including 15 production plants and over 100 distribution terminals.

In North America Tessengerlo has enjoyed steady organic growth since its inception. However, growth does not come without its challenges. With constraints in their network becoming more evident, Tessengerlo recognized transportation asset availability, accessibility of transport modes, production capacity utilization and operating costs needed to improve.

Tessengerlo leveraged the optimization capability within anyLogistix (ALX) to improve their supply chain performance by considering:

- Plant capacity utilization
- Production costs allocation
- Transportation spending
- Terminal distribution costs

The outcome of the project resulted in strategic supply chain modifications to ensure the best customer service while maximizing supply chain capability.
