Towards a Full-Cycle Ecosystem for Simulation

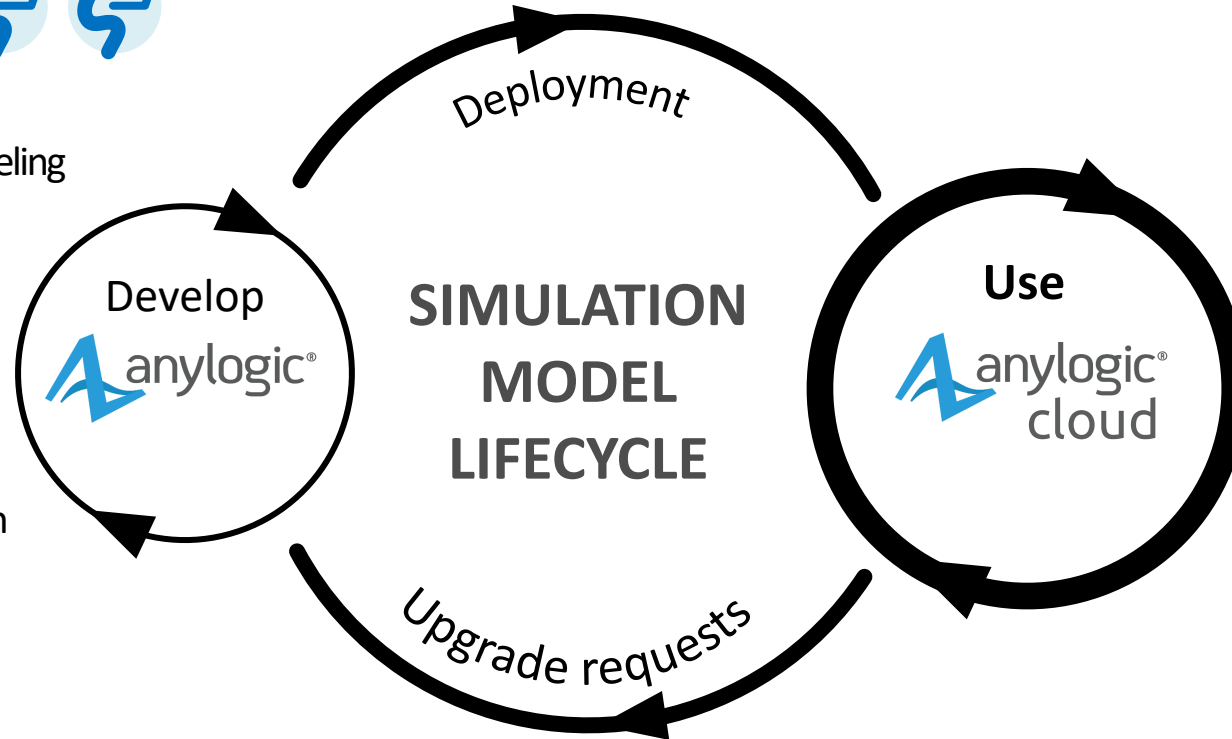

SMEs

Developers

- Conceptual modeling
- Spatial modeling
- Logic coding
- Debugging
- Validation
- Animation design

End Users

Stakeholders

- Deployment / Secure model repository
- Execution: uptime & performance
- Data connectivity & Workflow integration
- User / access management
- Version / update management
- Scenario management
- Web frontend. Dashboard design
- Experiment planning
- Optimization
- Output analysis & interpretation

Pilot project for Lisbon: Amoreiras Plaza Junction simulation*

Camara Municipal,
Lisbon government
Customer

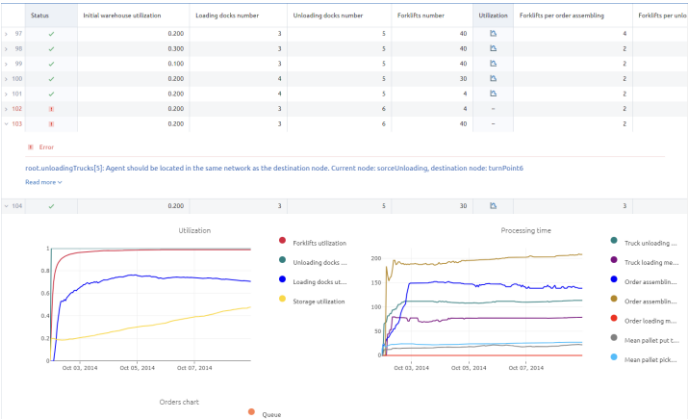

Infrastructure requirements

- On-premises web service, no desktop installation
- Single sign-on with 2FA and user management with Okta Verify
- Custom web interface and appearance
- Integration with other government applications

*This story is fictional; any resemblance to actual events, living or dead, or actual locales or persons is purely coincidental

AnyLogic Cloud in 2025

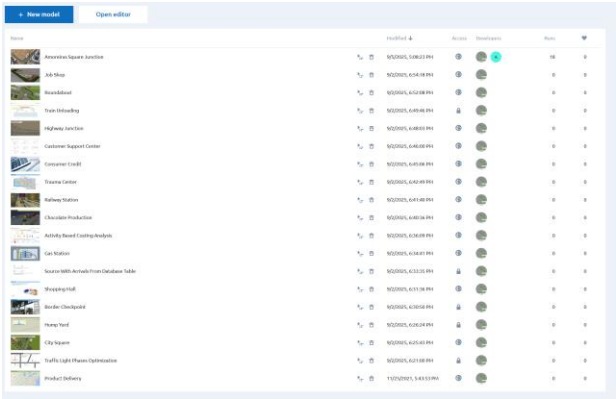

Completed runs

OAuth 2.0 / SSO

New “My models” view

[Q4] Automated fileserver cleanup

- Private Cloud backup without deleted files

[Q4] Kubernetes

- Private Cloud prototype in k8s

AnyLogic Cloud in 2026

Elastic Private Cloud

- Scale up and down executor service automatically

NVidia Omniverse

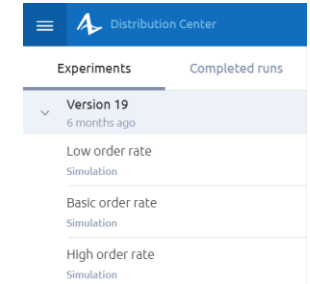

- Render hi-fidelity 3D animation for the models running in AnyLogic Cloud

Cloud API

- Refactoring (Swagger)
- Optimization experiment API
- New methods for managing experiments

Experiments	Completed runs
Version 19 6 months ago	
Low order rate Simulation	
Basic order rate Simulation	
High order rate Simulation	

Full-Cycle Ecosystem for Simulation

Find out more at the presentation in four hours
[AnyLogic 9 and the Full-Cycle Ecosystem for Simulation](#)

Thank you!
